

Support Global Taxation with the ViewCentral Learning Management System

Extend worldwide payments with dynamic global, real-time tax calculation and reporting

Benefits

- Real-time global tax calculation for all forms of payment
- Automated determination of shipping address by class type
- Single tax value presented to customers
- Full reporting on tax breakdown

Automate the taxation of training services

Many training organizations are extending their programs globally and finding it difficult to calculate, report and administer tax to multiple agencies. In the United States training services are typically non-taxable, however globally most services are taxed. The administrative burden to collect appropriate types of tax from global course purchases can be a daunting challenge. As indirect tax rates continue to increase and the rules become more complex, maintaining an accurate tax record to ensure that taxes are implemented, reported and managed appropriately is critical.

The recent trend in Europe of using credit cards for payment makes real-time tax calculation necessary. Historically, credit cards were infrequently used and the value added tax (VAT) was included later on the billing invoice. Learning management systems that do not include real-time taxation must provide customers initial pricing that excludes tax and then invoice them later for the full amount including tax. This results in delayed billing and administrative headaches.

ViewCentral's learning management system (LMS) has real-time tax calculation, enabling global credit card processing for services and taxation in one transaction. This allows customers to use a credit card to pay the full amount including tax, up front, without having to receive delayed billing or an addition tax charge.

Easily integrate, automate and report

ViewCentral is integrated with Avalara AvaTax®, the market leader in sales tax automation, which instantaneously and accurately calculates tax in more than 10,000 taxing jurisdictions, nearly 100 countries around the globe and over 170 different currencies. You can use your own Avalara account or use ViewCentral's Avalara account segregated for your company.

Key Features Include

- Tax integration with Avalara
- Global tax processing
- Real-time tax calculation
- Value added tax (VAT) validator
- Configurable shipping address
- Robust tax reporting

Tax is automatically calculated based on the preset configuration. VAT Numbers can be validated as well. This allows for the correct tax to be included as part of the transaction regardless of payment method.

Automatic address selection

Avalara requires a billing address, a shipping address and an amount to calculate tax. ViewCentral allows you to configure which shipping address will be used with each type of training delivery method: Classroom (ILT), Virtual Classroom (vILT), eLearning or OnDemand. You can select from the student's address, course location or billing address.

For example, the shipping address can be set to

- Use course location for Classroom classes
- Use student's address for vClassroom, eLearning and OnDemand classes

Detailed tax reporting

ViewCentral stores the details of individual taxes charged for a complete tax breakdown by country, state, county, city, etc... Customers are presented with a single tax amount for each transaction. Customizable fields are available for reporting and distribution so your administrator can easily run reports, track taxation and pay separate entities.

The bottom line

With the ViewCentral LMS you enjoy an easy, real-time global tax management solution that adds value to your training services, benefits your customers and simplifies your billing process.
